Ruben & Jean,

We couldn't find anywhere in our files/notes about the GWRS report where we specifically agreed to changing it to a year, or anything to the contrary. But, to our recollection we verbally agreed to increase the shutdown time & monitoring period to 1 year in the August 2012 conference call.

Mark

Ruben,

Please accept my apologies for the confusion. You are correct in that we agreed to a one year shut-down of the injection system. The six month language was carried over from the earlier Groundwater Remediation Summary. The system will remain shut-down for a minimum of a year and not restarted unless it is agreed that it appropriate to restart and the agencies approve restating the system. I hope that this clarifies the issue.

Jean

Subject: Shut Down of system at Arkwood...

Folks,

Hope you're doing well...

I'm a little confused...re-reading the reports sent by ADEQ and McKesson...

#9382258 is a monthly progress report for July 2012 from McKesson...under Roman Numeral III (Projected Activities; August) "the injection of non-ozonated water will be discontinued for one year to evaluate for rebound effects..."

#9382261 is a Groundwater Remediation Summary for June 2012 dtd Sept. 12, 2012...first paragraph; "recommends discontinuation of the non-ozonated water injection for six months..."

I thought, before Mr. Tzhone left when we all had a conference call...that all parties agreed to a one year discontinuation, with monthly sampling, of non-ozonated water.

Please clarify...

thank you

v/r
